CONTENTS OF VOLUME 26

NUMBER 1, SEPTEMBER 1973

E. H. Vernot, C. C. Haun, J. D. MacEwen and G. F. Egan. Acute Inhalation Toxicology and Proposed Emergency Exposure Limits of Nitrogen Trifluoride 1

Christine Kurstak, Michel G. Côte and Gabriel L. Plaa. Effect of Hypothermia on Carbon Tetrachloride-Induced Changes in Hepatic Ultrastructure 14

C. H. Budreau and R. P. Singh. Effect of Fenthion and Dimethoate on Reproduction in the Mouse 29

Virginia G. Carson, Donald J. Jenden, and Roger W. Russell. Changes in Peripheral Cholinergic Systems following Development of Tolerance to the Anticholinesterase Diisopropylfluorophosphate 39

W. M. Pardridge, I. L. Crawford and J. D. Connor. Permeability Changes in the Blood-Brain Barrier Induced by Nortriptyline and Chlorpromazine 49

Otis E. Fancher, G. L. Kennedy, Jr., J. B. Plank, D. C. Lindberg, W. H. Hunt and J. C. Calandra. Toxicology of a Butylene Glycol Adipic Acid Polyester 58

A. H. Campbell, W. R. Sewell, M. Chudkowski, J. E. Willson, G. H. Lord and K. Mohammed. The Effects of Feeding an Elemental Chemical Diet to Mature Rats: Toxicologic and Pathologic Studies 63

Zdenek Hruban, Agris Slesers and Iva Aschenbrenner. Pulmonary Intra-alveolar Histiocytosis Induced by Drugs 72

Jack G. Modell, Min K. Tham, Jerome H. Modell, Hugh W. Calderwood and Bruce C. Ruiz. Distribution and Retention of Fluorocarbon in Mice and Dogs after Injection or Liquid Ventilation 86

Forrest D. Hayes, Robert D. Short and James E. Gibson. Differential Toxicity of Monochloroacetate, Monofluoroacetate and Monoiodoacetate in Rats 93

Lincoln Chin, Albert L. Picchioni, William M. Bourn and Hugh E. Laird. Optimal Antidotal Dose of Activated Charcoal 103

Sara E. Bryan and James E. Bright. Serum Protein Responses Elicited by Iron, Cobalt and Mercury 109

Thomas B. Gaines, Renate D. Kimbrough and Ralph E. Linder. The Toxicity of Amitrole in the Rat 118

Khalid M. Al-Adil, Wendell W. Kilgore and Ruth R. Painter. Effects of Orally Ingested Aflatoxin B_1 on Nucleic Acids and Ribosomes of Housefly Ovaries 130

E. H. Herman and D. P. Chadwick. The Cardiovascular Actions of Thalicarpine 137

John A. Budny, R. J. Niewenhuis, E. V. Buehler and E. I. Goldenthal. Subacute Oral Toxicity of Trisodium Nitrilotriacetate (Na_3NTA) in Dogs 148

Short Communications

E. W. Schafer, Jr., R. B. Bunton, N. F. Lockyer and J. W. De Grazio. Comparative Toxicity of Seventeen Pesticides to the *Quelea*, House Sparrow, and Red-Winged Blackbird 154

Gaylord M. Conzelman, Jr., and David H. Gribble. Urinary Excretion of Beta-glucuronidase After Administration of Neomycin to Rats 158

Announcements 161

NUMBER 2, OCTOBER 1973

MONT R. JUCHAU AND EDWARD A. SMUCKLER. Subcellular Localization of Human Placental Aryl Hydrocarbon Hydroxylase 163

Information for Authors

Toxicology and Applied Pharmacology publishes papers containing original scientific research pertaining to alterations in tissue structure or function resulting from the administration of chemicals, drugs or natural products to animal or man. Short reviews of subjects of interest to toxicologists will be considered. Communications, Announcements and Letters to the Editor are discussed below.

Manuscripts are accepted for review with the understanding that the content has not been published previously and is not under consideration elsewhere. Further, it is understood that papers submitted will have received the appropriate clearance and approval necessary for publication prior to submission.

Submission of manuscripts. All manuscripts should be submitted to:

Gabriel L. Plaa
Department of Pharmacology
Université de Montréal
P.O. Box 6128
Montreal 101, Canada

Form of manuscript. Two complete copies of each manuscript, in English, should be submitted. However, papers in French or German can be considered for publication; authors should contact the Editor prior to submission. All manuscripts must be typewritten, double-spaced (including references) on one side of 8.5 × 11 in. white paper with 1 in. margins on all sides.

Page 1 should contain the article title, the names and affiliations of all authors, an abbreviated form of the title (not to exceed 40 characters including letters and spaces) and the name and complete mailing address of the person to whom all correspondence should be sent. The article title should be comprehensive and descriptive; proprietary names must not be used in titles, but may be identified in footnotes.

Page 2 should contain an abstract starting with the title of the paper, followed by the authors' names and reference to *Toxicology and Applied Pharmacology*; blanks should be left so that the Editor may fill in the volume and page numbers. The abstract will be limited to 250 words, but must contain a concise summary of what was done, the results obtained and valid conclusions which are drawn therefrom. It must mention the compounds or families of compounds studied, their actions and the species of animals. It must contain important words which are used as index terms, but not proprietary names.

Example: The 90-Dose LD50 and a Chronicity Factor as Measures of Toxicity. Hayes, W. J., Jr. (1972). *Toxicol. Appl. Pharmacol.* **00**, 00–00.

Format. The following text sections should be used.

Introduction. State why the investigation was carried out, note any relevant published work, and delineate the objectives of the investigation.

Methods. New methods or significant improvements of methods or changes in old methods must be described. Methods for which adequate reference can be cited are not to be described.

Results. Duplication between the text of this section and material presented in tables and figures should be avoided. Tabular presentation of masses of negative data must be avoided and replaced with a statement in the text whenever possible. The statement must include (a) what was done, (b) how it was done, (c) how the data were analyzed, (d) a measure of variability, and (e) the significance of the result.

Discussion. This section must relate the significance of the work to existing knowledge in the field and indicate the importance of the contribution of this study. Needless detailed recapitulation of the results must be avoided. Unsupported hypotheses and speculation should be omitted.

References. Names of authors are to be cited in the text with year of publication in parentheses. When there are more than two authors use the first author's name followed by et al. All papers mentioned in the text must be listed in the reference list and vice versa. References should be listed alphabetically typed double-spaced on a separate sheet at the end of the paper with all authors included. Journal titles should be abbreviated according to *Chemical Abstracts Service Source Index, 1969*. Note the following styles for references.

Dubnick, B. and Towne, C. E. (1972). Comparative metabolism of [2–^{14}C] mecloqualone in mice, rats, dogs and man. *Toxicol. Appl. Pharmacol.* **22**, 82–92.

Giebisch, G. (1971). Renal potassium excretion. In *The Kidney* (C. Rouiller and A. F. Muller, eds.), Vol. 3, pp. 329–382. Academic Press, New York.

Kuschinsky, G. and Lullmann, H. (1972). *Introduction to Modern Pharmacology*. Academic Press, New York.

Footnotes should be identified in the text by superscript Arabic numerals and cited consecutively throughout the paper. All footnotes should be listed in order typed double-spaced on a separate sheet. Proprietary names of substances and names and addresses of suppliers should be identified in footnotes. If the paper has been presented orally in whole or in part, the date, place and occasion should be included in a footnote.

Tables must be typed double-spaced on a separate sheet with the title typed directly above the table. Do not use abbreviations in the title. The title and footnotes must contain all the information necessary to understand and interpret the table without reference to the text. Tables must be numbered consecutively with Arabic numerals. Footnotes to tables should be identified by superscript lower case letters [a, b] etc. and placed at the bottom of the page containing the table.

Figures should be numbered consecutively with Arabic numerals. All legends are to be typed consecutively on a separate sheet. Lettering on the original figure should be large enough to be legible after a reduction of 50–60%. Graphs should be plotted with black India ink on white drawing paper no larger than 8.5 × 11 in. Grid lines that are to show must be inked in black. Photographs must be kept to a minimum; authors will be charged for halftone artwork exceeding three printed pages. Photographs should be glossy prints (5 × 7 or 8 × 10 in.). Standard mechanical lettering sets should be used. Characters should be approximately 0.32 cm high (Leroy Lettering Size 140).

High contrast micrographs not larger than 3.5 × 4.5 in. should be submitted in duplicate. This size will eliminate reduction. Electron micrographs should be submitted not larger than 6.5 × 4.5 in. Magnifications should be indicated in the legend.

Index terms suitable for use in the subject index must be submitted on a separate sheet. The list should include chemical name, generic name, common name and may include proprietary name of each important substance used in the experiments. It should also include biological activity of each substance investigated. Terms should elucidate important relationships.

Nomenclature. For styling of isotope, enzyme and biochemical nomenclature, consult the Information for Authors of the *Archives of Biochemistry and Biophysics.*

Abbreviations. Units will be in general accordance with the International System (SI) as adopted by the 11th General Conference on Weights and Measures. Periods are not used after abbreviations (note exceptions, e.g., in. for inches).

Common abbreviations to be used in this journal are:

m	meter	ppm	parts per million
cm	centimeter	cpm	counts per minute
mm	millimeter	dpm	disintegrations per minute
μm	micrometer	sc	subcutaneous
nm	nanometer	ic	intracutaneous
kg	kilogram	im	intramuscular
g	gram	ip	intraperitoneal
mg	milligram	iv	intravenous
μg	microgram	po	oral
ng	nanogram	LD50	median lethal dose
ml	milliliter	LC50	median lethal concentration
μl	microliter	Hz	hertz
mol	mole	°C	centigrade
M	molar	sec	seconds
mM	millimolar	min	minutes
μM	micromolar	hr	hours
N	normal	SD	Standard deviation
Ci	Curie	SE	Standard error

Reprints. A reprint order form will accompany galley proofs. Fifty reprints are supplied free of charge.

Communications. Toxicology and Applied Pharmacology will accept a limited number of brief reports of work that has progressed to the stage at which it is considered that the science of Toxicology would be advanced if the results were made available as soon as possible. These reports will be designated "Communications." Authors should submit short papers for this category of publication only when they believe that the rapid communication of their results is of the utmost importance to other investigators. The manuscript must be submitted in duplicate and conform strictly to the form and style of the journal. The length must be such that it will require no more than two pages in the present format of the journal.

Letters to the Editor. Letters to the editor will be accepted for publication subject to Editorial Board approval, provided that the content deals with papers published in Toxicology and Applied Pharmacology and that the comments are of scientific value. Letters should be received within two months of mailing of the journal and should be no longer than 250 words. Introduction of new data will not be permitted. Each letter will be submitted to the author of the original paper in order that any reply may be published simultaneously with the letter.

Announcements: Toxicology and Applied Pharmacology will accept for publication announcements of interest to toxicologists such as notices of society meetings, symposia or other matters.
